

Founded in 1975 in Tokyo, Japan, eSOL is a leading embedded software developer with core technologies in real time operating systems. Our advanced, scalable, multi-profiled RTOSes are tightly integrated with development tools and a rich set of vertical oriented middleware components to create flexible development platforms. Our rugged software development tools provide optimal reliability in backing up the highly complicated development process for RTOS-based applications.

We know that reliable RTOS based software platform make a significant difference to the quality and timeliness of our customers' products in a continuously growing and competitive world market. Today, our customers - global OEMs and ODMs ranging from consumer electronics to automotive applications - ship millions of products with technologies pioneered by eSOL.
